# Dr. Anika Sharma

Scientist E — Atmospheric Instrumentation & Applied AI

anika.sharma@example.org | +91 00000 12345 | New Delhi, India | linkedin.com/in/anika-sharma-example

## PROFESSIONAL SUMMARY

Electronics and avionics engineer with twelve years of airborne-systems integration and qualification testing, followed by ten years leading scientific instrumentation and edge-AI development in government service. Experienced in MIL-STD-1553 test rigs, UAV payload electronics, sensor telemetry, embedded GPU deployment and technical procurement.

## SKILLS

**Avionics:** MIL-STD-1553 / ARINC 429, Avionics integration
**Scientific instrumentation:** Environmental qualification testing, Sensor calibration, Radiosonde and upper-air systems
**Embedded systems:** Embedded C, ESP32 / STM32 microcontrollers
**Computer vision:** Image super-resolution, Object detection
**Drones & UAV systems:** UAV payload integration
**Edge AI:** NVIDIA Jetson deployment
**AI / machine learning:** Deep learning, PyTorch

## PROFESSIONAL EXPERIENCE

**Scientist E** Jul 2016 – Present

Upper Air Instrumentation Division, Kestrel Atmospheric Instrumentation Laboratory, New Delhi

Responsible for upper-air observation instruments, the division workshop and the laboratory's IoT and AI/ML activities.

- Lead a four-member AI/ML group developing lightweight super-resolution and detection models for UAV imagery, deployed on NVIDIA Jetson devices with TensorRT.
- Led acceptance testing and commissioning of radiosonde ground-receiving systems at three observing stations, writing the test protocol and the defect-tracking procedure.
- Designed and deployed an IoT monitoring network for laboratory infrastructure (ESP32 sensor nodes, MQTT, Node-RED, InfluxDB and Grafana dashboards) covering temperature, humidity and power quality.
- Prepared technical specifications and served on bid-evaluation committees for instrument procurement through the Government e-Marketplace in line with the General Financial Rules.
- Authored standard operating procedures for pre-flight checks and calibration of upper-air instruments used across the division.

*Additional charge:* **Workshop In-charge**, Upper Air Division Workshop Apr 2019 – Present

Additional charge of the division workshop supporting instrument repair, fabrication and calibration.

- Supervise technicians and plan preventive maintenance for workshop test equipment.
- Introduced a job-card and spares-inventory system for instrument repairs and calibration work.

*Nodal officer:* **Nodal Officer, IoT and AI/ML Initiatives** Jan 2021 – Present

**Senior Design Engineer** Jun 2004 – Jun 2016

Avionics Integration Group, Halcyon Avionics Design Bureau, Bengaluru

Integration and qualification testing of airborne electronics and UAV payloads.

- Developed payload interface electronics for a fixed-wing UAV electro-optical sensor and supported its ground and flight trials.
- Integrated mission-computer and display units on MIL-STD-1553 avionics buses and built the automated test rig used for bench validation.
- Planned environmental qualification (MIL-STD-810 vibration, temperature and humidity) for line-replaceable units and documented the test results.

**Graduate Engineer** Aug 2002 – May 2004

Test Systems Group, Meridian Electronics Limited, Bengaluru

Built automated test equipment for avionics line-replaceable units.

- Developed LabVIEW test sequences for power-supply and interface boards of avionics units.

## KEY PROJECTS

**Edge super-resolution pipeline for UAV imagery** *(Ongoing)* Sep 2021 – Present

Principal investigator, Kestrel Atmospheric Instrumentation Laboratory

Research prototype that enhances low-resolution UAV video in real time on embedded GPUs using pruned and distilled deep networks.

**Technologies:** NVIDIA Jetson Xavier NX, NVIDIA Jetson Orin Nano, PyTorch, TensorRT, ONNX, Docker, Structured pruning, Knowledge distillation, INT8 quantisation

- Implemented structured channel pruning and knowledge distillation to shrink the super-resolution network for embedded deployment.
- Converted models through ONNX to INT8 TensorRT engines, achieving 3.1× faster inference on Jetson Xavier NX.

**Radiosonde ground-station acceptance test protocol** Jan 2018 – Mar 2019
Coordinator
Station acceptance testing varied between sites.

- A common acceptance protocol and checklist adopted for new ground-receiving systems.

**IoT monitoring of laboratory infrastructure** Feb 2020 – Jun 2022
Project lead
Instrument rooms lacked continuous environmental and power-quality monitoring.
**Technologies:** ESP32, Environmental sensors, MQTT, Node-RED, InfluxDB, Grafana

- Deployed ESP32 sensor nodes publishing over MQTT to a Node-RED flow, InfluxDB time-series storage and Grafana dashboards with threshold alerts.
- Continuous monitoring with automated alerts replaced manual twice-daily readings.

## EDUCATION

**Ph.D., Electrical and Electronics Engineering** 2021 – ongoing
Northfield Institute of Science and Technology
**Thesis:** Lightweight deep networks for real-time enhancement of aerial imagery

**M.Tech., Avionics** 2010
Coastal Institute of Aeronautical Engineering, Chennai
**Grade:** CGPA 8.6/10
**Thesis:** Fault-tolerant data acquisition for airborne test instrumentation

**B.E., Electronics and Communication Engineering** 2004
Northfield Institute of Science and Technology, Northfield University, Pune
**Grade:** First Class with Distinction
